

Coleman Mine, Sudbury, Canada

Customer: G E Canada
Location: Coleman Mine, Sudbury, Ontario, Canada
Year of Completion: 1990
Hoist supplied: 3 Rope Tower Mounted Friction Hoist

This was a full turnkey project for the mechanical equipment involving the design, manufacture, supply, installation and commissioning of the hoist, as well as training of the hoist maintenance staff.

This hoist was a replacement for an existing hoist, and therefore was designed to fit onto existing foundations. The outboard bearing shared a pedestal with the adjacent service hoist, so this pedestal had to be cut on site and a new fabricated pedestal designed and installed in its place.

The project was completed and installed on time without complications to the satisfaction of the customer.
